For all your on-site water needs

There's more
to Clarity
than Biofilters

Clarity AquaTech provides a comprehensive range of on-site water systems so you don't have to worry about coordinating different contractors for each system.

In addition to our revolutionary Biofilters, Clarity AquaTech design and install domestic and commercial wells and water filtration systems to provide clean, safe on-site drinking water.

Our approved Clarity installers will carry out a full assessment of your site and discuss potential solutions to suit your requirements and fit in with the overall design of your property -- saving you time, money and effort.

Water Filtration Systems

Clarity AquaTech's advanced water filtration systems eliminate odours and ensure that the water coming into your home is always clean and safe.

Water from on-site wells sometimes carries an unpleasant odour caused by hydrogen sulphide, which many people refer to as the "rotten egg smell". Clarity AquaTech's water filtration systems neutralise hydrogen sulphide so the water is purified before it reaches your house.

Our systems also remove harmful substances including arsenic, chlorine, metal particles like mercury and lead, E.coli and hundreds of other contaminants from your water supply as well as improving the taste of your drinking water.

Your Clarity representative will be happy to discuss each option with you and determine the best solution to suit your needs.

Drilled and Dug Wells

Drilled and dug wells are an essential means of supplying water to properties without access to municipal services. Clarity AquaTech can advise on the best pumps, treatment systems and tanks to find the perfect solution for your home.

We provide a complete design and installation service so everything is taken care of for you, giving you complete peace of mind.

Servicing and Repairs

Water filtration systems and drilled or dug wells require regular servicing to maintain the quality of water coming into your home. We recommend annual servicing to maximise the performance and longevity of your water systems.

If you also own a Clarity Biofilter or any of our other water management systems, we will be happy to coordinate servicing to suit your needs.
